Python[®] Push-Pull MIG Gun Goes Global

Irvine, CA – Specialty welding products manufacturer, MK Products Inc., intensifies its effort to provide premier welding equipment on a global scale.

“The worldwide movement to standardize the Python[®], Advanced Gooseneck Welding Gun, as the Global Gun™ for aluminum welding is now in full swing,” says MK Products President Doug Kensrue. “The Python[®] has developed a reputation for excellence, durability and dependability. It has maintained and surpassed the well-established Cobra[®] Gold Gooseneck as the standard for Push-Pull MIG welding guns designed for feeding all types and sizes of aluminum wire. With the recent advances in digital wire feeder technology, the Python[®] can now be teamed up with most popular brands of wire feed welding equipment including Lincoln Electric, Thermal Arc, Miller Electric, ESAB and Fronius.”

Established in 1966, MK Products is the original inventor of Cobramatic[®] push-pull wire feed technology and is recognized worldwide as the leader in aluminum welding systems. MK Products also manufactures Aircrafter™ tabletop rotary positioners and MK Orbital™ Tube Welding Systems for Sanitary, High-Pressure and Ultra-High Purity applications.
