### **Cobra<sup>®</sup> MX Gun by MK Products a Direct Replacement for the Cobra<sup>®</sup> Gold With Additional Features**

**Irvine, CA** – MK Products introduces the new Cobra<sup>®</sup> MX patented design push-pull gooseneck gun that is capable of most any aluminum and hard wire welding job.

Intended for seasoned Cobra<sup>®</sup> gooseneck welders, the Cobra<sup>®</sup> MX, which can attach to any Cobramatic<sup>®</sup> Wire Feeder, has a gas valve in the gun and uses the original Cobra<sup>®</sup> rear trigger location. It's provided in air or liquid cooled models and is available with ¼" or 3/8" consumables. The Cobra<sup>®</sup> MX also has a protected fingertip speed control as well as a covered lever wire release in the handle. The molded Cobra<sup>®</sup> design provides a high-temperature barrel insulator, and there is also a covered wire feed mechanism.

With a head weight of only 2 lb 5 oz, the Patented Cobra<sup>®</sup> MX helps reduce welder fatigue and has an ergonomic left, right-handed speed control for the most ambidextrous welder.

Established in 1966, MK Products is the original inventor of Cobramatic<sup>®</sup> push-pull wire feed technology and is recognized worldwide as the leader of aluminum welding systems. MK Products also manufactures MK Orbital<sup>™</sup> tube welding systems for exotic alloys and Aircrafter<sup>™</sup> table-top rotary positioners.
